iTunes U Apple's iTunes U provides thousands of free lectures, videos, and courses on numerous topics. The service, which works on iPad, iPhone, and iPod touch, is a great way to take free college courses.

Students can access course materials from any device, at any time. They can complete assignments, watch lectures and presentations, and read textbooks all in one location. They can also keep track of what they've learned by saving notes in iBooks.

The app lets teachers use apps and their own materials to build lessons, collect and grade homework, start class discussions, and talk to students to answer questions and get feedback. They can also control who has access to documents and files they share with students.

It is a useful resource for some instructors, but not for others. David Pearson, a lecturer who teaches molecular and cellular biology at the University of California, Berkeley, stated that he will not use the app to teach because he is concerned that the course materials he creates might become entangled in a "walled garden."

In the meantime, UC Davis and other institutions are beginning to figure out how to get the most out of iTunes U. Through the service, the university has offered a variety of free on-campus courses, including "Literature and the Environment" in English and "Developmental Psychology" in psychology.

Even though these courses are popular, students from iTunes U also take Arabic Without Walls English, an iPhone application class, and a design as activism class from the landscape architecture department—all of which are among the iTunes U courses with the most views.

Over the course of the past 18 months, more than 493,000 audio downloads have been made for another popular course taught by the university's history department. The medieval period, architecture, and literature are all covered in this overview of European civilization.

According to Apple's support document for iTunes U, the company intends to end the program at the end of 2021, but teachers will still be able to upload course material until the 2020-21 academic year. In the interim, teachers can turn the iPad into a powerful teaching assistant and monitor student progress by utilizing apps like Classroom and Schoolwork.
